Application Programming Interfaces

APIs are often used by developers to get data from one service to another. They serve as bridges between two backend services without needing to make duplicate copies.

...but which one do I use?

APIS ARE A PAIN IN THE...

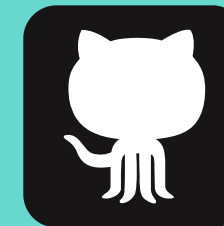

BUT, sometimes it is difficult to know which API to use when there are so many similar services out there.

Solution:

API GATEWAYS

An API gateway takes in a user query and translates them into API calls. The gateway then aggregates the various services required to fulfill them, and returns the appropriate result.
